10.0.6 BugFixes
===============

    Presentation Server

        General
            Fixed TabWithinPage bug when tabbing from an "All Pages" control
            Don't raise an EDITSTATECHANGED event for a non-visible control
            Ensure primary window has the input focus after the splash-screen closed
            Suppressed parent focus events when destroying a modal dialog box
            (#2753) Ensure z-order is not changed when setting the SIZE property
            Fixed shutdown issue after generating VSPRINTER2 (OIPI.Net) output
            Fixed VSPRINTER1 (OIPI) crash when generating TCL (OLIST) output
            Fixed changing/saving UTF8 mode in Application Settings

        DATETIME object
            Removed unsupported BACKCOLOR and FORECOLOR properties
            Fixed bug when resolving format for VALUE-based property access
            Implemented missing VALUE-based property editors

        EDIT-based object
            Fixed AllowFocus bug that prevented tabbing

        EDITBOX object
            Removed ACCEPTENTER property - this is always TRUE$ for backwards
compatibility

        EDITTABLE object
            Don't allow the Enter key to shift focus when non-protected
            (#2742) Ensure SelectAll() in the editor uses the max width of the cell

        LISTBOX object
            Fixed invalid array index bug when setting tab stops

        PROPERTYGRID object
            Fixed issue where the DPI is set too soon when the control is created.

        SYSTEM object
            (#2785) Fixed Access Violation bug in OBJECTID method

        TABCONTROL object
            Fixed painting bug when tab background is too large for a multi-line tab

        WINDOW object
            (#2743) Ensure there is an active MDI when another MDI child is closed
            Fixed single-control load mode in OIWIN_FORMLOADPREV

Event Designer

    (#2750) Ensure scrollbars are applied in script editor
    (#2777) Sort control IDs in AL order when building target object list

Menu Designer

    Fixed bug that prevented editing of first menu item

Form Designer

    Fixed sorting bug when returning control lists
    Added the DropDownList options for Autofill to the dropdown list in an EditTable
    (#2769) Fixed QuickPaint where number of controls spilled over into multiple pages

EDITTABLE object

    Fixed cell editing bug when in ReadOnly mode
    Fixed cell text color bug when in ReadOnly mode

Messages

    Fixed spelling mistake in OIWIN_READERR

DLL Struct functions

    Added support for DLL struct repository naming convention
    Added support for simple 64-bit types

O4W

    General
      Updated some plugins to conform to latest jQuery/jQuery Mobile versions

    O4W Form Wizard
        Fixed to use IN.VALUE instead of ICONV for input of key field values

    O4W WYSIWYG Form Wizard
        Fixed drawing issues

    Registration Manager (OI Console)
        Changed to save error code (when retrying registry methods), and to allow
for read-only operation if write permissions aren't available

   Miscellaneous

    STPROC, STPROCINS Editors
        Fixed double-click behavior when tabs (instead of spaces) are used on
$INSERT lines, and when double-clicking on items in non-SYSPROG applications

    DEPLOYMENT DEFINITION Editor
        (#2771) Fixed build history to properly OCONV date

    GIT
        Changed GIT_GUI method to work with --merge option in pulls

    Global Find/Replace
        Continued fixes and enhancements

    BFS/DSBFS
        Fixed problems with MYSQL datasets

//

10.0.6 New/Updated
==================

   Presentation Server

    General
        Optimized page swap rendering
        Implemented PAGESWAPRENDERMODE property for paging components
        Implemented REPAINT method
        Added Repaint parameter to the INVALIDATE method
        Removed "inherited event" processing
        Added RDW_FRAME when setting REDRAW back to TRUE$

    DATETIME object

Implemented Relative time specifiers for VALUE-based properties

     WINDOW object
      Implemented READPREV method

  O4W

     General
      Improved performance by reducing redundant output (for duplicate events and classes)

      O4WQUALIFYEVENT
       Added new event "classlink" for optimization (used for example with a whole table of links or buttons so that there's only a single function that gets called to act on the click, based on a class name)

     O4W Form Wizard
      Changed to use new optimized classclick event instead of individual qualifyevents on icon buttons
      Added ability to specify foreground and background colors on search results page

     O4W Report Wizard
      Changed to use new optimized classclick event instead of individual qualifyevents when called as multiselect popup

     Lock Manager (OI Console)
      Changed to use new classclick event

  Banded Report Writer (BRW)

     Added support for SYSDICT items. Example code added to supplied RTI_BRW_SUPPORT example routine.

  Miscellaneous

     RTI_CHAIN_SELECT
      New routine to optimize multiple sequential SELECT statements, when issued either to local OI system or backend BFS.
      Subroutine accepts a series of SELECT statements (@fm delimited), determines if local or server selects, runs the statements as a block, and returns

the final set of keys as an active select list.
        Currently implemented for OI, D3, QM hosts.
